1. (a)

$$dim(A) = rank(A) + null(A) \tag{1}$$

$$n = m + null(A) \tag{2}$$

$$null(A) = n - m \tag{3}$$

(b)

$$null(A) = dim(\ker(A))$$
 (4)

Then, ker(A) can have a basis B s.t. Span(B) = ker(A). i.e.

$$\forall \mathbf{v} \in \ker(A), \exists a_1, ..., a_{n-m} \in \mathbb{F}_2, \tag{5}$$

$$\mathbf{v} = a_1 \mathbf{b}_1 + \dots + a_{n-m} \mathbf{b}_{n-m} (b_i \in B) \tag{6}$$

 \therefore The answer is 2^{n-m} .

(c)

$$\forall \mathbf{x} s.t. \begin{cases} A\mathbf{x} = \mathbf{b} \\ A\mathbf{x}_0 = \mathbf{b} \end{cases}$$
 (7)

$$\therefore A(\mathbf{x} - \mathbf{x}_0) = 0 \tag{8}$$

$$\mathbf{x} - \mathbf{x}_0 \in \ker(A) \tag{9}$$

Then, choosing each element of \mathbf{x} carefully (1 or 0), $\mathbf{x} - \mathbf{x}_0$ can be any element of \mathbb{F}_2^n .

$$\therefore \{\mathbf{x} - \mathbf{x}_0 | A\mathbf{x} = b\} = \ker(A) \tag{10}$$

 $\therefore \mathbf{x} - \mathbf{x}_0$ has 2^{n-m} solutions.

 \therefore **x** has 2^{n-m} solutions.

2. (a)

$$f(c\mathbf{v} + (-c)\mathbf{v}) \ge \min\{f(\mathbf{v}), f(\mathbf{v})\}\tag{11}$$

$$\therefore f(\mathbf{0}_V) \ge f(\mathbf{v}) \tag{12}$$

(b) Because every element $\mathbf{v}_t \in V_t$ is in V by definition.

$$V_t \subseteq V \tag{13}$$

3.

$$p(x) = x^2 + bx + c \tag{14}$$

$$= (x - r_1)(x - r_2) (15)$$

$$= x^2 - (r_1 + r_2)x + r_1r_2 (16)$$

(17)

$$\therefore b = -r_1 - r_2, c = r_1 r_2 \tag{18}$$

(19)

4.

$$\mu(P,Q) = degree(PQ) \tag{20}$$

$$= degree(QP) \tag{21}$$

$$=\mu(Q,P)\tag{22}$$

$$\mu(0,0) = degree(0) \tag{23}$$

$$=0 (24)$$

$$\forall P \neq 0, \tag{25}$$

$$\mu(P, P) = degree(P^2) \tag{26}$$

$$=2degree(P) \tag{27}$$

$$> 0 \tag{28}$$

$$\mu(P+Q,R) = degree((P+Q)R) \tag{29}$$

$$= \max \left\{ degree(P), degree(Q) \right\} + degree(R) \tag{30}$$

$$\mu(P,R) + \mu(Q,R) = \max \{ degree(P) + degree(R), degree(Q) + degree(R) \}$$
(31)

(31)

$$= \max \{ degree(P), degree(Q) \} + degree(R)$$
 (32)

$$\therefore \ \mu(P+Q,R) = \mu(P,R) + \mu(P,Q) \tag{33}$$

$$c \in \mathbb{R},$$
 (34)

$$\mu(cP,R) = degree(cPR) \tag{35}$$

$$= degree(PR) \tag{36}$$

$$\neq c \cdot degree(P, R)$$
 (37)

 $\therefore \mu(\cdot, R)$ is not a LT.

 $\therefore \mu$ is not a IP.

5.

$$\alpha \beta \mathbf{x} = \lambda \mathbf{x} \tag{38}$$

$$\beta \alpha \beta \mathbf{x} = \beta(\lambda \mathbf{x}) \tag{39}$$

$$\beta \alpha(\beta \mathbf{x}) = \lambda(\beta \mathbf{x}) \tag{40}$$

(41)

 $\therefore \lambda$ is an eigenvalue of $\beta \alpha$.

6. (a)

$$\varphi(\mathbf{v}) = \lambda \mathbf{v} \tag{42}$$

$$\varphi(\mathbf{v}) = \lambda \varphi(\mathbf{v}) \tag{43}$$

$$(\lambda - 1)\varphi(\mathbf{v}) = 0 \tag{44}$$

$$\lambda = 1_{\mathbb{F}} \vee \varphi(\mathbf{v}) = 0 \tag{45}$$

$$\lambda = 1_{\mathbb{F}} \vee \varphi(\mathbf{v}) = 0_{\mathbb{F}} \mathbf{v} \tag{46}$$

$$\therefore \lambda \in \{0_{\mathbb{F}}, 1_{\mathbb{F}}\} \tag{47}$$

(b) Let $\forall \mathbf{v}, \varphi(\mathbf{v}) = \mathbf{v}_0$. (\mathbf{v}_0 is fixed.) Then assume $\varphi = \varphi^*$. If $\mathbf{v} \neq \mathbf{w} \in V$,

$$\langle \mathbf{v}_0, \mathbf{w} \rangle = \langle \mathbf{v}, \varphi^*(\mathbf{w}) \rangle$$
 (48)

$$\langle \mathbf{v}_0, \mathbf{w} \rangle = \langle \mathbf{v}, \mathbf{v}_0 \rangle \tag{49}$$

$$\langle \mathbf{w}, \mathbf{v}_0 \rangle = \langle \mathbf{v}, \mathbf{v}_0 \rangle \tag{50}$$

$$\mathbf{v} = \mathbf{w} \tag{51}$$

This is contradition. \therefore not always $\varphi = \varphi^*$.

7. (a)

$$\langle \varphi(\mathbf{v}), \mathbf{w} \rangle = \langle \mathbf{v}, \varphi^*(\mathbf{w}) \rangle$$
 (52)

$$\langle \varphi^*(\mathbf{w}), \mathbf{v} \rangle = \langle \mathbf{w}, \varphi(\mathbf{w}) \rangle$$
 (53)

$$\therefore (\varphi^*)^* = \varphi \tag{54}$$

(b)

$$\forall \mathbf{v} \in \ker(\varphi), \varphi(\mathbf{v}) = 0 \tag{55}$$

$$\forall \mathbf{v}' \in (\operatorname{im}(\varphi^*))^{\perp}, \forall \mathbf{w} \in W, \tag{56}$$

$$\langle \mathbf{v}, \varphi^*(\mathbf{w}) \rangle = 0 \tag{57}$$

$$\langle \varphi(\mathbf{v}), \mathbf{w} \rangle = 0 \tag{58}$$

$$\therefore \text{ if } \mathbf{v} \in \ker(\varphi), \tag{59}$$

$$\varphi(\mathbf{v}) = 0 :: \forall \mathbf{w}, \langle \varphi(\mathbf{v}), \mathbf{w} \rangle = 0$$
 (60)

$$\langle \mathbf{v}, \varphi^*(\mathbf{w}) \rangle = 0 \tag{61}$$

$$\mathbf{v} \in (\mathrm{im}(\varphi^*))^{\perp} \tag{62}$$

(63)
